Seneca · AI-first communication

Tell it who. It decides what.

The right deck, document, graphic, GIF, or guide for every audience, built by Claude in one consistent design.

AI can make any format in minutes. We still ask it for a PowerPoint.

The format we default to is the one that used to be affordable. That constraint is gone, but the habit isn't.

How it works

One request. The right package.

1

Situation

Who's the audience, what's the moment, and what do you need from them?

2

Message

The answer, three points, and the ask, written once and shared by every piece.

3

Package

The fewest formats where each one has a distinct job.

4

Built

One visual identity, checked, in files anyone can open.

"Budget review with the CFO Thursday" → **6-slide deck** + **one-page pre-read** + **stat card** for the team channel

What it builds

Formats an Office file can't be.

Decks

Transitions, builds, notes, and overview, with a one-command PDF

instead of ~~dragging boxes~~

PDFs

Letters, one-pagers, and handouts on custom stationery

instead of ~~Word templates~~

Graphics

Banners, posts, and thumbnails at exact platform sizes

instead of ~~Canva~~

GIFs

Seamless looping explainers and animated stats

instead of ~~a motion designer~~

Guides

Click-through replicas of your software that coach each step

instead of ~~screenshot docs~~

In development: narrated videos and one-person pitch pages.

Seneca and Claude Cowork

Cowork makes the file you ask for. Seneca decides what the audience needs.

	Cowork's built-in file skills	Seneca
Starts from	The file you name	Who it's for and what's at stake
Makes	Word, PowerPoint, Excel, PDF	HTML decks, designed PDFs, graphics, GIFs, interactive guides
Across pieces	Each file built to its own request	One message and one design across the whole package
Motion and practice	What Office formats support	Looping animation and click-through practice
Editing afterwards	Open and edit in Office	Ask Claude, or edit the plain HTML
Ownership	Built in, maintained by Anthropic	MIT-licensed. Fork it and add your brand.

Based on Cowork's documented built-in skills, October 2026. Cowork also runs plugins, which is how Seneca fits in.

Better together

Not a replacement. A plugin.

Installs on the Claude you already run. One command from GitHub in Claude Code. Cowork adds plugins from GitHub too.

Office stays for editing. Use Cowork's built-ins when someone needs to work in the file.

Seneca is for landing the message. Pick the right formats for the audience and the moment.

Plain text you control. Every skill can be reviewed, versioned, and branded.

1 file

This deck is a single HTML file made with Seneca. Press O for the overview.

Bring one real message. We'll build its package.
